Operable Unit No. 2 Corrective Measure Study/Feasibility Study Treatability Studies

Sue G. Stiger, Program Director
Environmental Restoration Project
EG&G Rocky Flats, Inc.

As has been discussed with your staff, there are two treatability studies that should be performed under the Operable Unit (OU) No. 2 Corrective Measure Study /Feasibility Study (CMS/FS). These are solvent extraction and bioremediation.

Solvent Extraction: Due to the success of the solvent extraction treatability study under the sitewide treatability studies plan, we wish to pursue a bench-scale treatability study for OU 2 (903 Pad, Mound, and East Trenches). Specifically, we wish to conduct a bench-scale solvent extraction treatability study for the solid and liquid phase non-aqueous phase liquid/radionuclide contaminated material in trench T-3, Individual Hazardous Substance Site 110. This study should be performed under the OU 2 CMS/FS. It is our understanding that a contract is already in place, under the OU 2 Closures Major Activity Document.

Bioremediation: Due to the success of the bioremediation screening study under the Sitewide Treatability Studies Program, we wish to conduct follow-on studies. The follow-on studies would test subsurface soil and groundwater remediation.

Both of these studies are within the scope of the OU 2 Major Activity Document. Please provide a treatability study plans and/or proposed scopes of work, for our review and comment. These plans and/or scopes of work should be provided to us no later than January 6, 1995.

If you have any questions or comments, please call Scott Grace at extension 7199.

Jessie Roberson
Assistant Manager for
Environmental Restoration
